

# VOLCANO F1

Carrot imperator cello jumbo

**Volcano has high marketable yields with great storage capacity and aptitude to late harvest by top lifting.**

## CHARACTERISTICS

### Resistance

HR : Powdery mildew (Eh) ;  
IR : Cavity spot (P) ; Silvering (Si) ;

Cycle: Fall harvest

Harvest: Fresh, processing, and storage

Color: Orange

## DESCRIPTION

### Foliage

- Healthy with a strong attachment
- Good tolerance to first frosts at fall
- Good aptitude to late harvest by top lifting

### Root

- Cylindrical shouldered shape with rounded tip
- Average length: 8 – 9"
- Average diameter: 1.5"- 1.75"
- Good root quality and stores very well
  - o 140 day maturity
  - o Roots well buried in soil (no green shoulders, good tolerance to first frosts during fall
  - o Strong tolerance to silvering

**Vilmorin is a brand of the Business Unit Vilmorin-Mikado.** The genetic resistances are not dispensed from prophylactic measures to be used as an addition. Our recommendations, suggestions, growing cycles and maturity information are only indicative and based on our own observations and our general experience. They are not contractual and they do not necessarily imply a successful harvest and/or result. The success of the cultivation also depends on factors non-related with the seed.
