## Carrot Nantes Early

**Bolting resistant early nantes with excellent root quality**

### CHARACTERISTICS

#### Resistance

HR : Early blight, Alternaria stem canker (Aal) ; Powdery mildew (Eh) ;

Ideal for fresh market

Bolting resistance

Strong attachment for top lifting harvest

### DESCRIPTION

#### Plant

Very good tolerance to bolting

Healthy, upright habit

Strong attachment, good aptitude to harvest by top lifting and bunching

#### Root

Very cylindrical shape, well-rounded tips at maturity

Average length: 7 – 8" (18 – 20)

Average diameter: 1.25"- 1.5" (3 – 4 cm)

Excellent Root Quality: Uniform size and shape, smooth, good color, external and internal

Root size (length and diameter) depends on the sowing population

Earliness: Recommended for early spring sowing, maturity 95-100 days

#### Other

- HR: Alternaria, powdery mildew

- Ideal for fresh market

Sowing/Planting: April - May

Harvest: July - August

**Vilmorin is a brand of the Business Unit Vilmorin-Mikado.** The genetic resistances are not dispensed from prophylactic measures to be used as an addition. Our recommendations, suggestions, growing cycles and maturity information are only indicative and based on our own observations and our general experience. They are not contractual and they do not necessarily imply a successful harvest and/or result. The success of the cultivation also depends on factors non-related with the seed.
